POWERFULL DRIVING MECHANISM

The Selecto is a four-wheel drive machine. All four wheels are driven by powerful hydraulic wheel motors. The Selecto is a machine with articulated steering, this system is stronger and more stable than normal knuckle steering systems. This hydrostatic machine is powered by a 24 HP, 3 cylinder diesel engine, which is very quiet and economical in use.

MAXIMUM COMFORT

By designing the machine much attention has been paid to comfort for the user. This is for instance evident in the comfortable in height adjustable seats, wide footrests and all functions are electric/hydraulic operated. The machine is standard equipped with two in height adjustable seats. Although the standard Selecto is already very complete, various options are available.

USER-FRIENDLY

The smoothly operating electric joystick provides the control of the driving speed. Cruise control ensures a constant speed in the field and is part of the standard equipment. The Selecto is equipped with a hydraulic dumping hopper, so you can dump leaves for example easily in a box. The machine can be cleaned easily because it is possible to open or remove the wheel covers easily. The stainless steel haulm guiders are adjustable in height.

BENEFITS

- ✓ Sensor for straight driving
- ✓ Height adjustable haulm guiders made of stainless steel
- ✓ Emergency stops at every seat
- ✓ Cruise-control
- ✓ Big hydraulic dumping hopper with a high rear wall
