

LOADING BUCKETS

VEGNIÉK

PRODUCT-FRIENDLY WITH MAXIMUM CAPACITY

Compact machine

Product-friendly

Bucket remains always clean

COMPACT MACHINE

The Vegniek loading bucket is directly attached to the fork carrier of the forklift, together with the compact construction a high capacity is guaranteed. The two hydraulic cylinders ensure a perfect distribution of forces. Sticking behind edges is excluded because of the four wear strips which are welded along the whole length of the bucket.

PRODUCT-FRIENDLY

The round tubes in a special shape break up the stored product, making this bucket very suitable for vulnerable products. The position indicator makes it easy to see from the forklift when the bucket is levelled. As a result, the bucket always has the correct position, which means less wear and tear and it will slide easier into the product.

BUCKET REMAINS ALWAYS CLEAN

Due to the round bucket shape and the stainless steel bottom, the bucket remains clean. The viewing grids make the corners of the bucket clearly visible from the drivers-seat.

STANDARD VERSION

- ✓ Two hydraulic cylinders
- ✓ Four wear strips over the entire length of the bucket
- ✓ Stainless steel bottom
- ✓ All pivot points have bearings
- ✓ Position indicator
- ✓ Completely powder coated
- ✓ Fem III connection with quick release

SPECIFICATIONS

LB 250

Volume: 2250 ltr
Shovel width: 2560mm
Shovel depth: 1630mm
Shovel height: 1075mm
Weight: 750 kg
Tipping angle: 68°
Connection forklift: Fem III

LB 300

Volume: 3300 ltr
Shovel width: 3000mm
Shovel depth: 1875mm
Shovel height: 1250mm
Weight: 940 kg
Tipping angle: 68°
Connection forklift: Fem III
