DOUBLE BOX CARRIER

VEGNIEK

HIGHER CAPACITY

✓ Work safely

✓ More efficient handling

✓ Rock Solid

WORK SAFELY

The Vegniek Double box carriers are ideal for safe and efficient box handling. The two outer forks are slightly higher assembled than the two forks in the middle. Because of this design the boxes will stand firmly against each other during transport. Also the second layer of boxes are supported by the framework.

MORE EFFICIENT HANDLING

With the (demountable) box guide it is very easy to slide empty boxes against each other by using the side shift of the forklift. It is even possible to load and unload a truck with empty boxes from one side by using the Vegniek box carrier. The automatic lock system is optional. By using the automatic lock system the Vegniek double box carrier will be automatically attached and detached to the box carrier of the forklift.

ROCK SOLID

The Vegniek double box carriers are very robust. The square tube forks are composed bending profiles made of a special type of steel. All the essential corners are strengthened and the steel is provided by a strong two-layer powder coating. The box carriers are also available with a connection for a 3 point hitch (CatII). As a result, the box carriers can be used by forklifts as well as by tractors. Different sizes are avalaible on request.

BENEFITS

✔ Heavy duty

✔ Boxes always firmly against each other while transporting

✔ Demountable box guide

✔ Unobstructed view

✔ 2nd layer of boxes are supported by the framework
